PV AGREEMENT TRACKER

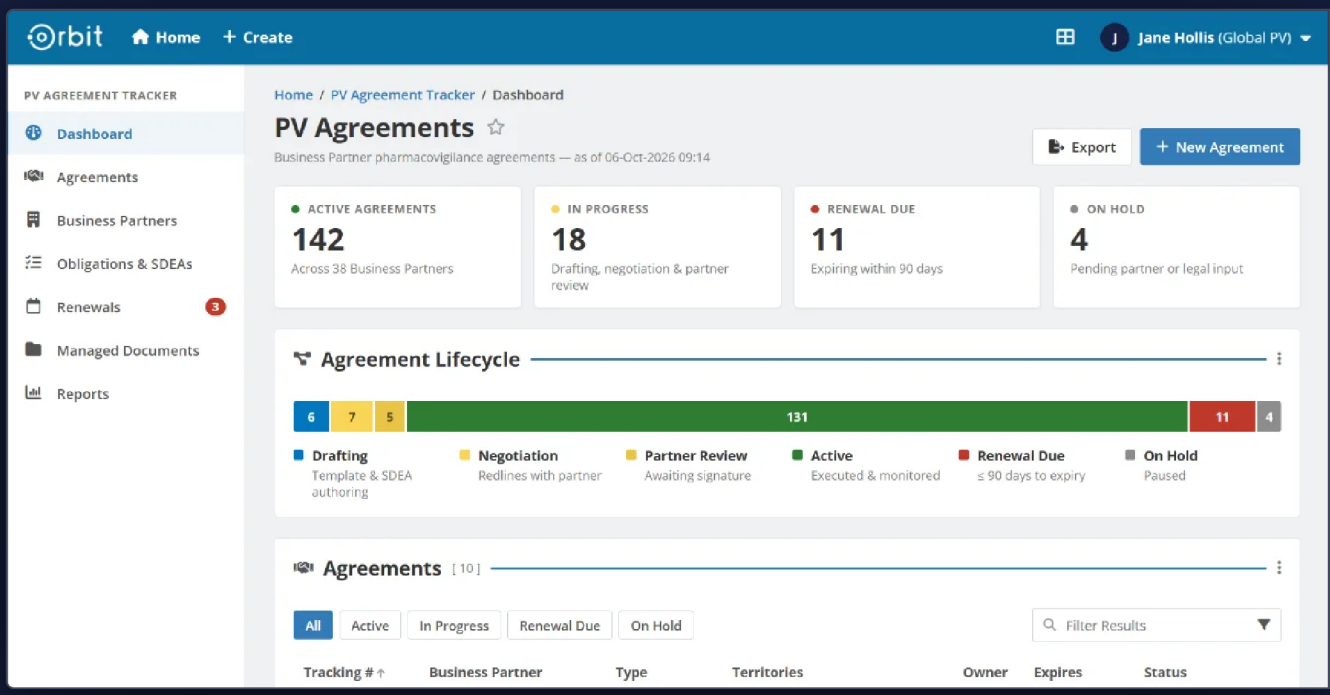

Every Partner. Every Obligation.

Orbit tracks the full life of each safety data exchange agreement, from negotiation and authoring through execution, reconciliation and renewal. Obligations, contacts and expiry dates stay visible, so partner responsibilities never drift out of view.

Renewal dates never missed

Obligations mapped per partner

Reconciliation evidence retained

CONFIDENTIAL

SDEA AND PV AGREEMENTS

Keep partner obligations under control

Orbit turns every SDEA and PV agreement into a tracked process with owners, dates and documentation, giving you real-time oversight of the obligations you and your partners carry.

HOW IT WORKS

01

Open the agreement

Capture the partner, products, markets and agreement type in a single record.

02

Negotiate and execute

Route drafting, legal review and signature with activities and dated approvals.

03

Operate the terms

Track exchange obligations, contacts and escalation paths while the agreement is live.

04

Reconcile and renew

Run periodic reconciliation, then trigger renewal or termination on schedule.

Partner oversight

One view of every business partner, their agreements, contacts and current status.

Renewal automation

Expiry, review and reconciliation dates generate reminders well ahead of the deadline.

Obligation clarity

Each agreement records the specific exchange terms, timelines and responsibilities in force.

Audit-ready records

Executed documents, amendments and reconciliation results stay attached to the agreement.

What the tracker covers

- SDEA and PVA lifecycle
- Business partner register
- Negotiation and authoring
- Executed agreement library
- Amendments and versions
- Obligation and term mapping
- Safety data reconciliation
- Renewal and expiry alerts
- Partner contact directory
