RISK MANAGEMENT TRACKER

Global Strategy. Local Execution.

Orbit connects the Core RMP to every local plan and commitment it generates. Distribute strategies to affiliates, track how each market implements them, and monitor aRMM commitments, REMS and EU RMP obligations against their deadlines from one place.

Global-to-local distribution

Commitment deadlines tracked

RISK MANAGEMENT SOLUTION

Connect global plans to local commitments

Orbit models the full risk management hierarchy, from Core RMP through local plans and additional risk minimisation measures, so nothing a market commits to falls out of view.

Drop a supporting image

or browse files

Plan hierarchy oversight

Trace each Core RMP to its local RMPs, REMS and aRMM commitments with live status on every branch.

Commitment automation

Due dates, reminders and escalations fire from the plan itself, so no commitment quietly ages out.

Affiliate alignment

Distribute strategies and materials to every market, and monitor how each one implements them.

Inspection-readiness

Regulator feedback, version history and follow-up actions are captured as an audit-ready change log.

HOW IT WORKS

01
Model the Core RMP
Configure safety concerns, measures and commitments once at the global level.

02
Distribute to markets
Push the plan and its materials to affiliates, with local versions linked to the core.

03
Track implementation
Follow each local commitment through status, activities and documented evidence.

04
Prove effectiveness
Report on measure effectiveness and produce the record an inspection asks for.

What the tracker covers

- Core Risk Management Plans
- Local RMPs
- EU RMP obligations
- REMS programs
- aRMM commitments
- Safety concerns register
- Educational materials
- Effectiveness measurement
- Regulator feedback log
