SIGNAL MANAGEMENT TRACKER

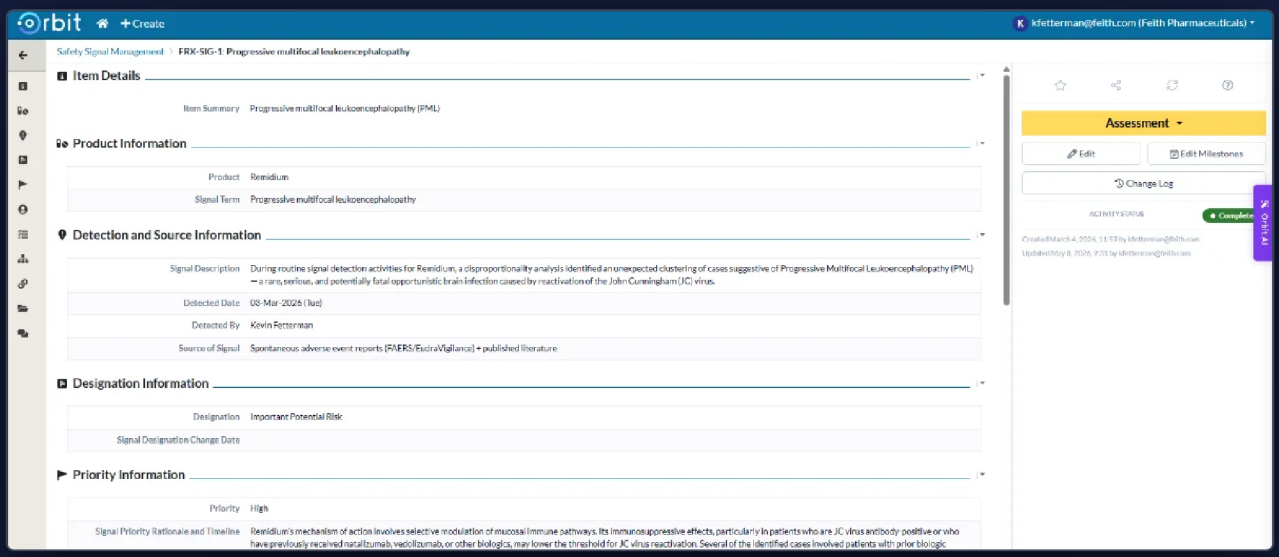

# Every Signal. Fully Documented.

Orbit runs your safety surveillance cycle on a schedule and keeps the paper trail behind it. Detection cycles, signal assessment reports and benefit-risk documents all live against the plan that governs them, with owners, due dates and outcomes recorded as work happens.

**Scheduled detection cycles**

**Assessment decisions documented**

**Benefit-risk history retained**

SIGNAL MANAGEMENT SOLUTION

# Run surveillance on a defensible cadence

From the Safety Surveillance Plan through detection cycles, signal assessment and benefit-risk evaluation, Orbit gives every decision a date, an owner and an evidence trail.

### Surveillance oversight

See open signals, active cycles and overdue assessments across every product in one view.

### Cycle automation

Detection cycles open on their schedule and notify their reviewers without anyone chasing them.

### Consistent methodology

Every product follows the same assessment steps, templates and validation criteria.

### Decision evidence

Validation decisions, SARs and BRADs stay linked to the signal that prompted them.

## WHAT THE TRACKER COVERS

- Safety Surveillance Plans
- Detection cycles
- Signal validation
- Signal Assessment Reports
- Benefit-Risk Assessments
- Literature review logs
- Product and concern linkage
- Action and commitment follow-up
- Cycle audit history

## HOW IT WORKS

**01**

### Set the plan

Define the Safety Surveillance Plan: sources, cadence, products and reviewers.

**02**

### Open the cycle

Detection cycles generate on schedule with activities routed to their owners.

**03**

### Assess and decide

Work the signal through validation, assessment and benefit-risk evaluation.

**04**

### Record the outcome

File the SAR or BRAD, log the decision and carry any action into a commitment.

**Detection Cycles** SSP-0142 [ 6 cycles ]
