

SIGNAL MANAGEMENT

Manage safety surveillance the connected way.

From routine detection cycles through identification, resolution and closure, Orbit provides top-down, real-time oversight of your organization's signal management activities.

Surveillance Strategy

Define strategies for each product's safety surveillance activities; capture lessons learned and harmonize teams.

Detection management

Manage signal detection work across partnerships and detection platforms in a centralized hub.

Signal Tracking

Track potential and identified signals, capture decisions, supporting evidence, actions and outcomes.

Safety Notifications

Notify local affiliates and partners of new signals, ESIs, variations, and required submissions seamlessly.

Optimize your signal workflow.

Only Orbit gives you oversight from MedDRA Query Strategies through detection, evaluation, resolution, and notification.

Everything is Connected.

While data science dominates the conversation, safety teams often overlook methods to optimize their approach to signal management with practical, integrated workflows.

01

Global Communications

Leverage Orbit's global-to-local distribution workflows to notify local partners and affiliates of new safety signals, assign tasks, and monitor national competent authority interactions.

02

Health Authority Requests

Track health authority requests to ensure that obligations are met, procedures are monitored proactively, and that surveillance strategies accurately reflect regulatory need.

03

Close Monitoring Events

Manage lists of close monitoring events (areas for close monitoring), and product risks with integrated MedDRA browsing for consistency across teams and reports.
